

LAXMAN REDDY VENNAM

Software Engineer | Full-Stack Developer (.NET, Angular, Node.js)

Hyderabad, Telangana, India | +91 9392650460 | vennamlaxman0413@gmail.com

linkedin.com/in/laxman-reddy-vennam | github.com/laxman0413

PROFESSIONAL SUMMARY

Software Engineer with 1.5+ years of experience building full-stack web applications, REST APIs, and microservices for multi-tenant SaaS platforms serving millions of users. Strong in C#/.NET, Node.js, Angular, TypeScript, and SQL/NoSQL databases, with hands-on experience in microservices, micro-frontends, event-driven systems, CI/CD, automated testing, and production on-call support. Solid foundation in data structures, algorithms, and system design; Agile team player who ships features on time.

TECHNICAL SKILLS

Languages : C#, JavaScript, TypeScript, Java, Python, C++, C, SQL (T-SQL)
Frontend : Angular, React.js, Redux, HTML5, CSS3, Micro-Frontends, Responsive Web Design
Backend : .NET, Node.js, Spring Boot, RESTful APIs, Microservices, Event-Driven Architecture, Kafka, Stored Procedures
Databases : Microsoft SQL Server, MySQL, PostgreSQL, MongoDB, Redis
Cloud & DevOps : AWS (S3, SQS, EC2, Lambda), Azure DevOps, Azure Service Bus, Docker, Kubernetes, Jenkins, Git, CI/CD
Monitoring & AI Tools: Grafana, Zenduty, Unit & Automated Testing, Code Review, Claude Code, GitHub Copilot, Cursor

PROFESSIONAL EXPERIENCE

Software Engineer | Keka HR | Hyderabad, Telangana

Aug 2026 – Present

- Develop and maintain features and fix production bugs across an Angular frontend and .NET backend monolith (Azure DevOps, Microsoft SQL Server) for an HRMS SaaS product used by 4,000–5,000 client organizations; deliver features on schedule.
- Optimized SQL Server stored procedures to improve database performance and application responsiveness.
- Own on-call responsibilities: respond to pages, triage and resolve production incidents; configured Zenduty alerts and monitor Grafana alerts for proactive issue detection.
- Contribute to the Performance Management and Learning modules of the Keka HRMS product; identify and raise bugs through proactive testing and root-cause analysis.

Software Development Engineer I | Darwinbox | Hyderabad, Telangana

Jan 2025 – Apr 2026

- Designed and deployed a DAG-based distributed data pipeline automating index provisioning across environments for a large-scale multi-tenant platform, improving reliability and reducing manual operational effort by 90%.
- Engineered fault-tolerant, scalable backend microservices and REST APIs handling high-throughput requests and secure cross-tenant access for a platform serving 3M+ users.
- Implemented a configuration-driven feature toggle system across 1,400+ multi-tenant environments, enabling per-customer changes without code deployments and cutting release cycle time by 75%.
- Built a data pipeline using LLMs and vector search to convert unstructured HR documents into actionable insights, cutting manual review time by 70%.
- Developed a real-time task board using Server-Sent Events and JWT authentication, with automated tests and CI/CD.
- Owned end-to-end delivery of production features (design, implementation, automated testing) with globally distributed cross-functional teams in an Agile workflow.
- Conducted regular code reviews; used GitHub Copilot and Cursor to accelerate coding and testing while manually validating all AI-assisted code before merging.

PROJECTS

E-Commerce Application | .NET, C#, SQL Server, Angular

- Built a full-stack e-commerce application to practice and learn .NET, using an Angular frontend, .NET REST APIs, and a SQL Server relational database.

Browser Screen Recorder & Secure Sharing Tool | React, Node.js, AWS S3

- Created a browser-based screen recorder with optional voice capture, storing recordings in AWS S3 with permission-controlled shareable links, cutting bug-reproduction time by 40%.

LLM-Based HR Document Intelligence System | Angular, Node.js, MongoDB, AWS S3, Kafka

- Designed an LLM-powered, event-driven pipeline using prompt chaining to parse unstructured HR documents into structured, queryable data.

Redis-Inspired In-Memory Key-Value Store | C++

- Built a thread-safe, concurrent key-value store from scratch in C++ with O(1) average-time SET/GET/DELETE, TTL-based expiry, and a background cleanup process.

ACHIEVEMENTS

- LeetCode Knight (rating 1800+), 600+ problems solved;
- CodeChef 3-Star (peak rating 1777);
- HackerRank 5-Star Problem Solving certification in C++.

EDUCATION

B.Tech in Computer Science | VNR Vignana Jyothi Institute of Engineering & Technology, Hyderabad

Dec 2021 – May 2025

CGPA: 8.77/10 | Gold Medalist for outstanding academic excellence
